

RPC marshallng

Marshalling is the packing of procedure parameters into a message packet

The RPC stubs call type-specific procedures to marshal (or unmarshal) the parameters to a call

- The client stub marshals the parameters into a message
- The server stub unmarshals parameters from the message and uses them to call the server procedure

On return

- The server stub marshals the return parameters
- The client stub unmarshals return parameters and returns them to the client progra

RPC example - call
