

Why is RPC interesting?

Remote Procedure Call (RPC) is the most common means for remote communication

It is used both by operating systems and applications

- DCOM, CORBA, Java RMI, etc., are all basically just RPC
 - NFS is implemented as a set of RPCs
- ➔ Someday you will most likely have to write an application that uses some form of RPC for remote communication (or you already have)

RPC example

Client Program:

```
...  
sum = server->Add(3,4);  
...
```

Server Interface:

```
int Add(int x, int y);
```

Server Program:

```
int Add(int x, int y) {  
    return x + y;  
}
```
