

Linux Paging

- ➡ Global replacement (like most Unix)
 - Modified second-chance clock algorithm
 - Pages age with each pass of the clock hand
 - Pages that are not used for a long time will eventually have a value of zero

Acknowledgments

Some of the course materials and projects are from

- Ryan Huang - teaching CS 318 at *John Hopkins University*
- David Mazière - teaching CS 140 at *Stanford*
- Sina Meraji - teaching CS 369 at *University of Toronto*
