Java API framework

The main Android OS from app point of view

- Provide high-level services and environment to apps
- Interact with low-level libraries and Linux kernel

Some components

- Activity Manager manages the lifecycle of apps
- Package Manager keeps track of apps installed
- Power Manager wakelock APIs to apps

Native C/C++ libraries

Many core Android services are built from native code

- Require native libraries written in C/C++
- Some of them are exposed through the Java API framework as native APIs e.g. Java OpenGL API
- → Technique: JNI Java Native Interface app developer can use Android NDK to include C/C++ code (common in gaming apps)
