Ext3 - What if there is a crash

→ Recovery - Go through log and "redo" operations that have been successfully committed to log

What if ...

- TxBegin but not TxEnd in log?
- TxBegin through TxEnd are in log, but inodes, bitmaps, and data have not yet been checkpointed?
- What if Tx is in log; inodes, bitmaps and data have been checkpointed; but Tx has not been freed from log?

Journaling Modes

Journaling has cost - one write = two disk writes (two seeks with hard disks)

- → Several journaling modes balance consistency and performance
- Data journalling journal all writes, including file data
 - expensive to journal data
- Metadata journaling journal only metadata
 Used by most FS (IBM JFS, SGI XFS, NTFS)
 - file may contain garbage data
 - Ordered mode write file data to real FS first, then journal metadata Default mode for ext3
 - old file may contain new data
