## Why distributed systems?

## Why do we want distributed systems?

- Performance parallelism across multiple nodes
- Scalability by adding more nodes
- Reliability leverage redundancy to provide fault tolerance
- · Cost cheaper and easier to build lots of simple computers
- Control users can have complete control over some components
- Collaboration much easier for users to collaborate through network resources

## The promise of distributed systems

## The promise of distributed systems

- · Higher availability one machine goes down, use another
- Better durability store data in multiple locations
- More security each piece easier to make secure
